Industry standard connector is provided on plug-in module

Ideas for first pass on PCB:

- Host Control interface: USB or whatever is easiest from your favorite microcontroller
- Low-speed interface to the SFP module is a 2-wire serial interface such as I2C and some logic level inputs and outputs. (see for example, the SFP-M2-T.pdf file).
- The modules follow the multisource agreement. See [Multi-Source Agreement | ProLabs](#)
